

Couriers Integration Base

for Microsoft Dynamics 365 Business Central

intelligent
systems

Microsoft Dynamics 365
Business Central

Overview

Couriers Integration Base allows companies to seamlessly send a goods delivery request within Dynamics 365 Business Central. The integration is established via an API (Application Programming Interface) with your preferred courier agent. The application provides the opportunity to establish connection with numerous courier service providers.

When an order is published in Dynamics 365 Business Central and the goods are packaged, delivery services can be requested. To populate the label shipping information, such as delivery details, product type, service level, quantity, and other information, is taken from the order. The label is generated in PDF format and can be printed from any printing device. All the information to request the delivery of the parcel is received by the selected courier agent to be dispatched to the selected destination.

It is a perfect tool for:

- Companies that place orders worldwide and use courier services
- Creating labels for international mail, lightweight items and merchandise

The application is integrated with Dynamics 365 Business Central.

Couriers Integration Base is available on Microsoft AppSource.

Features

General:

- Couriers Integration Setup to handle all courier integrations
- Possibility to run in test or live mode
- Up-to-date data for courier offices and services available through API
- Split or combine shipments based on the particular needs and requirements by the courier
- Store Waybill files in PDF and print them at any time
- Courier Management List provides options for easy navigation and handling on any step of the process
- Use the available options to track and/or evaluate shipments, provided by the couriers
- Keep track of all requests to all different couriers from the same page.
