

External Database Connector

How will you benefit from it?

External Database Connector is an application that allows you to connect to any database and transfer data to your Dynamics 365 Business Central ERP system. The tool, created by the Intelligent Systems team provides flexible setups and mappings that utilize data exchange between different sources of data and the ERP system. It works with all the databases that support Open Database Connectivity (ODBC) connections as SQL Server, MySQL, Oracle, and more. The application reads data from tables, views, and fields, maps them to the corresponding data in Dynamics 365 Business Central and based on the predefined mappings and setups creates new or overwrites existing entries in the ERP.

It is a perfect tool for:

- Organizations that need to connect existing databases with their cloud or on-premises Dynamics 365 Business Central ERP system.

Features

- Establish connection between external databases and the ERP database through API (Application Programming Interface);
- Import data from external databases to Dynamics 365 Business Central via tables and fields mapping;
- Execute raw queries;
- Data transactions log;

The application is available in Microsoft AppSource. [Contact us](#) to learn more about External Database Connector solution.

About us

Employing more than 200 people and reporting 18 years of continuous growth, Intelligent Systems is an international consultancy company that delivers business software projects to local and multi-country organizations.
